Abstract. Extended parts of Krousia (Mt Disoro and Mt Mavrovouni) and Belles Mts (NE Greece) are protected by international and national conventions and laws (Ramsar Convention, Natura 2000 Network). The flora of Krousia Mts has been partly investigated, while very few floristic records exist for Mt Belles. The investigated area includes pure and mixed stands of *Salix*, *Platanus*, *Alnus*, *Paliurus*, *Carpinus*, *Ostrya*, *Quercus*, *Castanea*, *Tilia*, *Fagus*, and *Abies*. The present paper reports the flora of forest and shrubland habitats of the investigated area. The floristic catalogue is based on the plant species recorded in 431 relevés, as well as on a supplementary floristic inventory. For each taxon information is given about its spatial distribution, constancy and the habitat type from which it was collected. The floristic catalogue reports a total of 483 taxa. Furthermore, 439 taxa were recorded in Belles (405 new records) and 429 (five new records) in Krousia Mts (367 in Disoro and 373 in Mavrovouni).

Key words: Belles, floristic catalogue, Krousia, NE Greece, vegetation types

Introduction

Floristic information on Krousia Mts can be found in several publications (Gamisans & Hebrard 1980; Strid 1986; Strid & Tan 1991; Athanasiadis & al. 1993; Theodoropoulos & al. 1995; Babalonas 1995; Fotiadis & Athanasiadis 2003). On the contrary, Mt Belles could be regarded as floristically unexplored, since only few published data are available (Zaganiaris 1938, 1939, 1940; Strid 1986; Strid & Tan 1991). In addition to this, some floristic data can be retrieved from the maps given in *Flora Hellenica* (Strid & Tan 1997, 2002). However, the data presented by the above-mentioned works about these two mountains are only partly informative regarding the type of habitat from which the plant specimens were collected.

Phytosociological studies can elucidate the vegetation structure and provide ecological data. Thus a floristic inventory based on phytosociological research is

provided, with important data about the species distribution in different vegetation units and habitats (Spribille & al. 2001), which can further improve the management of e.g. important medicinal or endangered plant species. Floristic inventories of this type, especially those concerning forests and shrublands, are rather limited in Greece (e.g. Eleftheriadou 1992; Tsiripidis & Athanasiadis 2003).

This paper is aiming to present: 1) the forests and shrublands flora of Krousia and Belles region and 2) the ecological and environmental preference of each taxon. On this basis we have approached the plant variety and floristic diversification of different types of vegetation and, including ecological data, attempted to evaluate the habitats. These investigations offer important knowledge in managing: from the protection of different types of vegetation with special flora composition to protection of species by means of their habitats, as well as better exploitation of forest products.

Investigated area

Krousia and Belles Mts are located in Central Macedonia (NE Greece). Krousia, which extends into the Greek territory, comprises two small mountains (Disoro and Mavrovouni), while Belles runs in east-west direction along the border of Greece, Bulgaria and F.Y.R.O.M. Krousia are located south of the valley that binds lake Kerkini and lake Doirani. Its highest peak Mavrovouni reaches 1131 m. Mt Belles is located north of the same valley and its highest peak is 2031 m (Fig. 1). The northern slopes of Mavrovouni and the southeastern slopes of Belles are protected by the Ramsar Convention (the artificial lake of Kerkini). Furthermore, extended parts of Krousia and Belles Mts have been included in the Greek Natura 2000 Network (GR 1230002, GR 1260001).

Krousia and Belles belong to the Serbomacedonian Massif. Petrographically, the area is dominated by metamorphic rocks (e.g. amphibolites, gneisses and schist). Late-tectonic and post-tectonic sediments of the Pleistocene have accumulated as lacustrine and continental deposits (IGME 1983). The climate of the area belongs to the Cfa climatic type according to Köppen's classification and is characterized as humid, with long and very hot summers, mild winters, and lack of dry season (Flocas 1992). The bioclimate of the investigated area can be re-

garded as humid to subhumid, with cold to harsh winters (Mavrommatis 1980).

The forests and shrublands of the investigated area were classified into four main units representing syntaxa in the rank of order (*Populetalia albae*, *Prunetalia spinosae*, *Quercetalia pubescens* and *Fagetalia sylvaticae*; Fotiadis 2004). *Populetalia albae* includes all azonal forests dominated by *Platanus orientalis*, *Alnus glutinosa* and *Salix alba*, while *Prunetalia spinosae* includes all shrublands dominated by *Paliurus spina-christi*. *Quercetalia pubescens* includes all shrublands dominated by *Quercus coccifera* and *Carpinus orientalis*, as well as forests dominated mainly by *Quercus pubescens*, *Q. frainetto*, *Q. petraea* subsp. *medwediewii* and other deciduous species (*Carpinus orientalis*, *Ostrya carpinifolia* and *Castanea sativa*). Finally, *Fagetalia sylvaticae* includes *Fagus sylvatica*, *Tilia tomentosa* and *Abies borisii-regis* forests. Shrublands, which belong to *Prunetalia spinosae* and *Quercetalia pubescens*, occupy 172.51 ha, while forests of *Populetalia albae*, *Quercetalia pubescens* and *Fagetalia sylvaticae* occupy 550.04 ha (Table 1).

Material and methods

The majority of plant specimens were collected during phytosociological investigation in the Krousia Mts and the Greek part of Mt Belles. Field work was conducted from May to August of 1999, 2000, 2001 and 2002 and was supplemented by collections in spring and autumn. Some extra collections were made during the summer of 2003.

Collecting localities fell within the coordinates 40°58' to 41°27' N and 22°44' to 23°22' E (Fig. 1). An inventory of 431 phytosociological relevés was evaluated floristically (70 relevés in *Populetalia albae*, 35 relevés in *Prunetalia spinosae*, 242 relevés in *Quercetalia pubescens*, and 84 relevés in *Fagetalia sylvaticae*). Plant

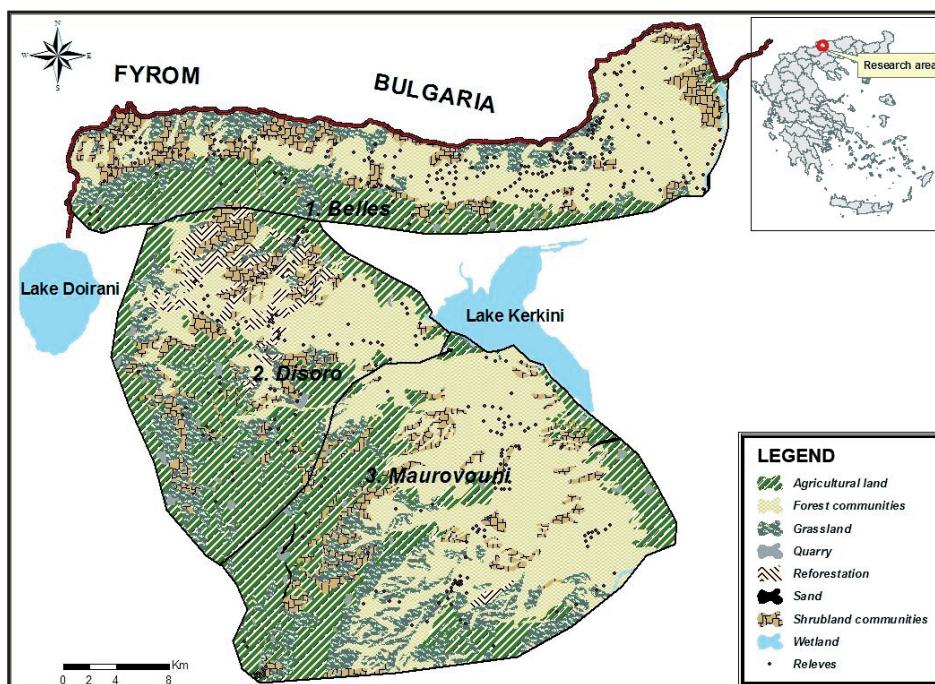

Fig. 1. Map of Krousia and Greek Belles Mts, with the collecting localities.

specimens were collected inside forest and shrubland communities, whereas edges and clearings were avoided. Plant specimens outside the relevés were collected simultaneously. Voucher specimens are deposited in the herbarium of the Laboratory of Forest Botany / Geobotany (TAUf). Some extra floristic data of 35 relevés (Gamisans & Hebrard 1980; Theodoropoulos & al. 1995), all concerning *Quercetalia pubescentis*, were also included.

The entire area of investigation was subdivided for reasons of convenience into three parts: Disoro, Mavrovouni and Belles (Fig. 1). The coordinates that confine the three subareas as well as their altitudinal range are given in Table 2.

Families, genera and species are arranged alphabetically within the four major groups of vascular plants, viz. *Pteridophyta*, *Gymnospermae*, *Dicotyledoneae* and *Monocotyledoneae*. The nomenclature follows Strid & Tan (1997, 2002), Greuter & al. (1984, 1986, 1989, 1993), Strid (1986), Strid & Tan (1991), Tutin & al. (1968-1980, 1993), and selected taxonomic literature (in the latter case the sources are cited). The authors of plant names are those provided by Brummitt & Powell (1992).

Categorizations of species constancy per subarea and phytosociological unit follow those suggested by Tsiripidis & Athanasiadis (2003):

1) for the species constancy per subarea, the terms 'rare', 'scattered' and 'common' apply to the species occurrence of <10%, 10-20% and >20% of the relevés per subarea, respectively, and

2) for the constancy per phytosociological unit the terms 'very rare', 'rare', 'scattered', 'common' and 'very common' apply to the species occurrence of <5%, 5-10%, 10-20%, 20-40%, and >40% of the relevés per order, respectively.

Table 1. Area of different land uses and vegetation types.

Type of land uses and vegetation types	Cover area (ha)
Agricultural land	404.16
Forest communities	550.04
Grassland	208.73
Quarry	14.73
Reforestation	35.55
Sand	1.91
Shrubland communities	172.51
Wetland	3.49
Total area	1391.1028

Taxa not previously reported for Krouisia or Belles (Turrill 1918, 1919, 1920, 1929; Zaganiaris 1938, 1939, 1940; Rechinger 1939; Moulopoulos 1965; Gamisans & Hebrard 1980; Papanicolaou & Zacharof 1980; Strid 1986; Strid & Tan 1991; Zieliński 1991; Athanasiadis & al. 1993; Christensen 1994; Theodoropoulos & al. 1995; Babalonas 1995; Fotiadis & Athanasiadis 2003) are given as new for the investigated subareas.

The floristic catalogue (Table 8) includes the following:

found taxa (1st column); their habitats (2nd column); constancy of taxa in subareas (3rd column); constancy of taxa in the defined orders (4th column); subareas where taxa are recorded for the first time (5th column); subareas where species recorded earlier by other researchers (6th column).

In the table of the floristic catalogue the following abbreviations are used:

- subareas: **1** – Belles; **2** – Disoro; **3** – Mavrovouni (see Table 2);
- taxa in subareas: **r** – rare; **s** – scattered; **c** – common;
- phytosociological orders: **A** – *Populetalia albae* (*Alnus*, *Platanus* and *Salix* stands); **B** – *Prunetalia spinosae* (stands with *Paliurus*); **C** – *Quercetalia pubescentis* (*Quercus*, *Ostrya* and *Castanea* shrublands and forests); **D** – *Fagetalia sylvaticae* (*Fagus*, *Tilia* and *Abies* forests);
- taxa in a phytosociological order: **vr** – very rare; **r** – rare; **s** – scattered; **c** – common; **vc** – very common;
- authors abbreviations: **G** – Gamisans & Hebrard (1980); **T**: Theodoropoulos & al. (1995); **At**: Athanasiadis & al. (1993); **M**: Babalonas (1995); **F**: Fotiadis & Athanasiadis (2003); **S**: Strid (1986); **S & K**: Strid and Tan (1992).

Table 2. Coordinates and altitudes of the collecting localities in the three subareas of Krouisia and Greek Belles Mts.

	Name of subarea	Number of collecting localities	Latitude (N)		Longitude (E)		Altitude (× 10 m)	
			min	max	min	max	min	max
Belles	Greek Belles	257	41°13'07"	41°23'04"	22°44'58"	23°17'59"	9	150
Krouisia	Disoro	93	41°04'61"	41°12'55"	22°48'41"	23°03'05"	9	75
	Mavrovouni	116	40°58'67"	41°10'25"	22°55'26"	23°15'18"	5	104

Results and discussion

A total of 483 taxa are reported in the floristic catalogue (Tables 3, 8) with 439 (405 new records) of these occurring in Mt Belles, 367 (65 new records) in Mt Disoro and 373 (21 new records) in Mt Mavrovouni. Furthermore, 429 taxa are found all over the area of Krousia and five of them are designated as new records.

The majority of registered taxa, belongs to dicotyledones (391), followed by monocotyledones (75) (Table 4). Likewise, the majority of families belongs to dicotyledones (59), followed by monocotyledones (7), gymnosperms (4), and pteridophytes (2).

The majority of species appear in almost all vegetation units, both forests and shrublands (Tables 5, 8), although their constancy values may vary. However, each of the four vegetation units bears a different number of species found solely in it (Table 6). In the case of azonal forests (*Populetalia albae*), the occurrence of these species is related to special ecological conditions (water springs and rivers, or even wastelands) (Prieditis 1997). Likewise, the flora of *Tilia*, *Fagus* and *Abies* forests (*Fagetalia sylvaticae*) is diversified by a number of species, the occurrence of which could be related (Bergmeier & Dimopoulos 2001) to the lack of any considerable human impact, the climatic conditions (higher precipitation and lower temperatures), and the dense canopy.

Although only two species are found solely in *Prunetalia spinosae* (*Paliurus spina-christi* shrublands), the shrublands of this order are the richest from the phytodiversity point of view, considering the low number of conducted relevés (Table 6). The species richness could be attributed to the fact that they are transitional between pastures and forests, thus lying inside an ecotone characterized by rich phytodiversity (Vrachnakis & al. 2005).

An altitudinal decline has been observed species richness found between the low-altitude thermophilous shrublands (eg. *Paliurus spina-christi*) and forests (eg. *Quercus pubescens*, *Q. frainetto*) and high-altitude forests (eg. *Tilia tomentosa*, *Fagus sylvatica*) (Tables 7, 8). It could be explained by the fact that the former have an open canopy (Kyriazopoulos & al. 2006) subjected to human activity (by grazing, etc.), with has an impact on a significant number of species (e.g. *Asperugo procumbens*, *Juglans regia*; Mucina 1997).

Table 3. Taxa recorded in the three subareas of Krousia and Greek Belles Mts.

	Taxa recorded	New taxa for the area
Belles	439	405
Disoro	367	65
Mavrovouni	373	21
Krousia (Disoro and Mavrovouni)	429	5
Total area	483	5

Table 4. Floristic composition in the three subareas of Krousia and Greek Belles Mts.

	families	species	subspecies	taxa (species + subspecies)
Pteridophyta	2	8	3	11
Gymnospermae	4	4	2	6
Dicotylinonae	59	309	82	391
Monocotylinonae	7	60	15	75
total	72	381	102	483

Table 5. Taxa per habitat (shrublands and forests).

Habitat	Number of taxa (%)
only in forests	36.03
only in shrublands	4.14
in forests and shrublands	59.83

Table 6. Taxa per phytosociological order.

Phytosociological order	Number of taxa found only in one order	Total number of taxa	Number of taxa per relevé (%)
Populetalia albae	36	333	30.11
Prunetalia spinosae	2	237	42.86
Quercetalia pubescens	52	408	9.6
Fagetalia sylvaticae	19	248	17.44

Table 7. Taxa per habitat (low and high altitudes).

Habitat	Number of taxa (%)
taxa found in shrublands and forests of low altitudes	33.51
taxa found almost in all habitats	30.00
taxa found in forests of middle and high altitudes	29.46
taxa found in forests of high altitudes	7.03

<i>Moehringia trinervia</i> (L.) Clairv.	Mostly in <i>Fagus</i> forests	1, 3: r	C: vr, D: s	1	3 (At, M, T)
<i>Moenchia mantica</i> (L.) Bartl.	Very common in <i>Quercus</i> forests	1: r, 2; c, 3: s	A: vr, B: C: c, D: vr	1	2 (At), 3 (At, M)
<i>Petrorhagia illyrica</i> subsp. <i>haynaldiana</i> (Janke) P.W. Ball & Heywood	In wet places	1, 2, 3: r	A: r, B: s, C: vr	1	2 (At), 3 (At, T)
<i>Saponaria officinalis</i> L.	Mostly in <i>Quercus</i> forests	1, 2, 3: r	A: r	1, 2	3 (M)
<i>S. compacta</i> Fisch.	In <i>Castanea</i> stands	1: r	C, D: vr	1	2 (At), 3 (At, T)
<i>S. conica</i> L.	Mostly in shrublands	1, 2, 3: r	A: vr, B: r, C: vr	1, 3	2 (F)
<i>S. coronaria</i> (L.) Clairv.	Mostly in <i>Quercus</i> forests	1: r, 2; c, 3: s	A: vr, C, D: s	1	2 (At, T), 3 (At, M, T)
<i>S. italica</i> (L.) Pers. subsp. <i>italica</i>	One of the most common species in <i>Quercus</i> forests	1, 2, 3: c	A, B: r, C: vc, D: s	1	2 (At, G, T), 3 (At, M, T)
<i>S. viridis</i> L.	Mostly in forests	1, 2, 3: r	A, C, D: r	1	2 (At, G), 3 (At, M, T)
<i>S. vulgaris</i> subsp. <i>bosniaca</i> (G. Beck) Greuter & al.	Very common in forests	1: c, 2; s, 3: c	A, C, D: c	1	2 (At, G, T), 3 (At, M, T)
<i>Stellaria aquatica</i> (L.) Scop.	In wet places	3: r	A: vr	3 (At)	
<i>S. media</i> (L.) Vill.	It enters into thermophilous forests and shrublands	1: c, 2, 3: s	A, B: c, C: s, D: r	1, 2	3 (M)

Table 8. Continuation.

taxa	habitat	constancy in subareas	constancy in orders	new record	recorded by other authors
Celastraceae					
<i>Euonymus europaeus</i> L.	Mostly in forests of high altitudes	1, 2, 3: r	A: i; B, C, D: vr	1	2 (At), 3 (At)
<i>E. latifolius</i> Mill.		1, 3: r	C: vr; D: vr	1	3 (F)
Cistaceae					
<i>Cistus creticus</i> L. subsp. <i>creticus</i>		1: r, 2: c, 3: r	A: B; vr; C: s	1	2 (At, T), 3 (At)
Compositae					
<i>Achillea clypeolata</i> Sm.	Mostly in forests and shrublands of low altitudes	1: s, 2: c, 3: s	A: i; B, C: c	1	2 (At), 3 (At, T)
<i>A. grandifolia</i> Friv.	Mostly in forests	1: r	A: i; C, D: vr	1	
<i>A. millefolium</i> L. subsp. <i>millefolium</i>		1, 2, 3: r	A, B: vr; C: r	1	2 (At, T), 3 (At, M)
<i>Anthemis arvensis</i> L. subsp. <i>arvensis</i>	Mostly in shrublands and open woodlands	1: c, 2: r, 3: s	A: i; B: vc; C: c; D: r	1	2 (At), 3 (At)
<i>A. tinctoria</i> subsp. <i>australis</i> R. Fernández	Mostly in shrublands and open woodlands	1: s, 2: s, c	A: vr; B, C: c; D: vr	1	2 (At), 3 (At, T)
<i>Arctium minus</i> Bernh.	In wet places	1: r, 2: s, 3: r	A: c; C: r	1	3 (M)
<i>Artemisia vulgaris</i> L.	In wet and damp places	1, 2, 3: r	A: c; B: vr	1, 2	3 (M)
<i>Bellis perennis</i> L.	Mostly in <i>Paliurus</i> shrublands	1, 2, 3: r	A: vr; B: r	1, 3	2 (F)
<i>Centauraea affinis</i> Friv. subsp. <i>affinis</i>	Rare, in thermophilous forests and shrublands	1: r, 2: c, 3: r	A: vr; B: i; C: s	1	1 (S&T), 2 (At, F), 3 (At, T, F)
<i>Chondrilla juncea</i> L.	Mostly in <i>Paliurus</i> shrublands	1, 2: r	C: vr	1	2 (At)
<i>Crepis sancta</i> (L.) Babc.		1, 2, 3: r	A: vr; B, C, C: vr	1, 2	3 (F)
<i>Doronicum hungaricum</i> Rchb. f.		3: r	C: vr		3 (At, T)
<i>D. orientale</i> Hoffm.		1, 2, 3: r	A, C, D: vr	1	2 (At), 3 (At)
<i>Hedypnois cretica</i> (L.) Dum.Cours.		1, 3: r	B: s, C: vr	1	3 (F)
<i>Hieracium baumhini</i> Besser	Mostly in <i>Paliurus</i> shrublands	1, 2, 3: r	A: vr; B, C: r	1	2 (At), 3 (At, T)
<i>H. cymosum</i> L.		1, 2, 3: r	C, D: vr	1	1 (S), 2 (At), 3 (At, T, F)
<i>H. macranthum</i> (Ten.) Ten. subsp. <i>macranthum</i>	Mostly in thermophilous forests and shrublands	1: r, 2: s, 3: r	B: vr; C: r; D: vr	1	2 (At), 3 (At)
<i>H. murorum</i> L.		1, 3: r	C: vr; D: r	1	3 (At, M)
<i>H. piloselloides</i> Vill. subsp. <i>piloselloides</i>		1: r, 2: s, 3: r	B, C, r; D: vr	1	2 (At), 3 (At, M, T)
<i>H. racemosum</i> Willd.		1, 2: r, 3: s	A, C, D: r	1	2 (At, T), 3 (At, M, T)
<i>H. reichingeriorum</i> Zahn		1: s, 2: 3: r	C: vr; D: c	1	2 (At), 3 (At)
<i>H. umbellatum</i> L.		1, 2, 3: r	C, D: vr	1	2 (At), 3 (At, M, T)
<i>Hypochoeris cretensis</i> (L.) Bory & Chaub. –	Mostly in <i>Paliurus</i> shrublands	1: r, 2: s, 3: r	A: i; B, c, C: r	1	2 (F), 3 (F)
Correct spelling (vs. 'Hypochoeris') according to Greuer & al. (1993: 557)					
<i>Lactuca serriola</i> L.		1, 2, 3: s	A: s; B, c; C: r; D: vr	1	2 (At), 3 (At, M, T)
<i>Lactuca viminea</i> (L.) & C. Presl subsp. <i>viminella</i>		1: r, 2: c, 3: s	C: s; D: vr	1	2 (At), 3 (At, M, T)
<i>Lapsana communis</i> L. subsp. <i>communis</i>	Common in forests	1, 2: c, 3: s	A: c; B: vr; C, D: c	1	2 (At, T), 3 (At, T)
<i>Leontodon cichoriaceus</i> (Ten.) Sanguin.	Very common in <i>Quercus frainetto</i> forests	1: r, 2, 3: c	A: i; B: s, C: c, D: vr	1	2 (At, T), 3 (At, M, T)
<i>Leontodon crispus</i> Vill. subsp. <i>crispus</i>	In thermophilous forests and shrublands	1, 2, 3: r	A: vr; B, C: r	1	2 (At), 3 (At, M, T)
<i>Leontodon hispidus</i> L. subsp. <i>hispidus</i>	In thermophilous forests and shrublands	2: s, 3: r	B: s, C: vr	2 (F), 3 (F)	

Table 8. Continuation.

taxa	habitat	constancy in subareas	constancy in orders	new record	recorded by other authors
<i>Matricaria recutita</i> L. - For correct nomenclature of the chamomile, see Jeffrey (1979: 350)		1, 2, 3: r	A: r; B: c, C: vr	1	2 (At), 3 (At, M)
<i>Mycelis muralis</i> (L.) Dumort.	Very common in <i>Ahns</i> and <i>Fagus</i> forests	1: c, 2, r; 3: s	A: c, B, C: r; D: vr	1	2 (At), 3 (At, M, T)
<i>Prenanthes purpurea</i> L.	It was found in one locality, inside <i>Tilia</i> forest	1: r	D: vr	1	
<i>Rhagadiolus stellatus</i> (L.) Gaertn.		1: s, 2, 3: r	A: c; B: vr; C: vr	1	2 (F), 3 (F)
<i>Silybum marianum</i> (L.) Gaertn.	Rare, in thermophilous shrublands	1, 2, 3: r	A: s; B: c	1, 2	3 (F)
<i>Taraxacum officinale</i> agg.	Scattered in azonal forests and <i>Paliurus</i> shrublands	1, 2, 3: r	A, B: s; C: vr	1, 2	3 (M)
<i>Tephroseris integrifolia</i> subsp. <i>aucherii</i> (DC.) Nord.		1, 3: r	A: vr	3	1 (S)
<i>Tragopogon dubius</i> Scop.	Rare, in thermophilous forests and shrublands	1: r; 2, s, 3: r	B, C: vr	1, 2	3 (M)
Convolvulaceae					
<i>Calystegia sepium</i> (L.) R. Br.	Rare, in thermophilous forests and shrublands	1: r	A, B, C, D: vr	1	2 (At), 3 (At, M)
<i>Convolvulus cantabrica</i> L.		2, 3: r	A, C: vr		
Cornaceae					
<i>Cornus mas</i> L.	Very common in shrublands and forests	1: s, 2, 3: c	A, B: s, C, D: c	1	2 (At, G, T), 3 (At, M, T)
<i>C. sanguinea</i> (C.A. Mey.) Jav. subsp. <i>australis</i>	Mostly in <i>Platanus</i> stands	1, 2, 3: r	A: vc, C: vr	1	2 (At), 3 (At, M)
Crassulaceae					
<i>Sedum cepaea</i> L.	On rocks, inside forests and shrublands	1, 2, 3: r	A: vr; C: r; D: s	1	2 (At, G), 3 (At, M, T)
<i>S. hispanicum</i> L.	On rocks, inside forests and shrublands	1, 2, 3: r	C: vr; D: s	1, 2	3 (F)
<i>Umbilicus luteus</i> (Huds.) Webb & Berthel.	Mostly in <i>Tilia</i> stands	1, 2: r	D: vr	1, 2	
<i>U. rupestris</i> (Salisb.) Dandy	On rocks, inside forests and shrublands	1, 2, 3: r	A, B, C, D: vr	1, 2	3 (M, F)
Cruciferae					
<i>Alliaria petiolata</i> (M. Bieb.) Cavara & Grande	Mostly in azonal forests	1, 3: r	A: s, B, C, D: vr	1	3 (At, M, T)
<i>Alyssum murale</i> Waldst. & Kit.		1, 2, 3: r	A, B: vr; C: r; D: vr	2	1 (S), 3 (M)
<i>Alyssum turkestanicum</i> Regel & Schmalh.	Rare, in thermophilous forests and shrublands	1, 2, 3: r	A: vr; B: r, C, D: vr	1, 2	3 (F)
<i>Arabis diaboli</i> (Thunb.) Heynh.		1, 2, 3: r	A, B, C: r; D: vr	1	2 (At), 3 (At, M)
<i>Arabis laxa</i> Sm.	Mostly in forests	1, 3: r	A: r; C: vr; D: r	1	3 (F)
<i>A. sagittata</i> (Bertol.) DC.	Mostly in forests	1, 3: r	A, C, D: vr	1	3 (At, M, T)
<i>A. turrita</i> L.	Mostly in forests, especially of high altitudes	1, 2, r	A, C: vr	1, 2	3 (M)
<i>Berteroa orbiculata</i> DC.		1, 2, 3: r	A, B: s	1, 2	3 (M)
<i>Calepina irregularis</i> (Asso) Thell.	Scattered in azonal forests and <i>Paliurus</i> shrublands	1: s, 2, r; 3: s	A: c, B: vc, C: vr	1	2 (F), 3 (F)
<i>Capsella bursa-pastoris</i> (L.) Medik.	Rare, in thermophilous forests and shrublands	1: s, 2, r; 3: s	A: c, B: vc, C: vr	1	
<i>Cardamine acris</i> Griseb.	In wet places	1, 3: r	A: vr	1, 3	
<i>C. bulbifera</i> (L.) Crantz	Mostly in <i>Fagus</i> forests	1: r, 3: s	A: r; C: vr; D: c	1	3 (At, M, T)
<i>C. graeca</i> L.	Mostly in forests	1, 2, c, 3: s	A: vc, B: r, C, D: c	1	2 (At, T), 3 (At, M, T)
<i>C. hirsuta</i> L.	Mostly in forests and shrublands of low altitudes	1: s, 2, c, 3: s	A, B, C: s; D: vr	1	2 (At), 3 (At, M, T)

Table 8. Continuation.

taxa	habitat	constancy in subareas	constancy in orders	new record	recorded by other authors
<i>C. impatiens</i> subsp. <i>pectinata</i> (Pall. ex DC.) Trautv.	Very common species of <i>Paliurus</i> shrublands	1, 2: r	A, C; vr	1, 2	3 (M)
<i>Draaba muralis</i> L.	Rare, in thermophilous forests and shrublands	1, 5; 2; s; 3: c	A: vr; B; vc; C: r	1, 2	1 (S), 3 (M)
<i>Erysimum cuspidatum</i> (M. Bieb.) DC.		1, 3: r	A, C; D; vr		
<i>Erysimum crassistylum</i> C. Presl		1, 2: r	A: vr; B; r; C; D; vr	1, 2	
<i>Lunaria annua</i> subsp. <i>pachyrhiza</i> (Borbás) Hayek	Mostly in azonal and <i>Fagus</i> forests	1; s; 2: r	A; s; C; vr; D: s	1, 2	
<i>Nasturtium officinale</i> R. Br.	A rare species of <i>Paliurus</i> shrublands	2: r	B; vr	2 (F)	
<i>Rorippa thlaspioides</i> (Griseb.) Fritsch	Mostly in thermophilous forests and shrublands	1; r; 2; s; 3: r	A: vr; B; s; C: r	1	2 (At, T), 3 (At, M, T)
<i>Sisymbrium officinale</i> (L.) Scop.	Mostly in thermophilous forests and shrublands, especially in <i>Paliurus</i> shrublands	1; s; 2; 3: r	A; s; B; vc; C; vr	1	2 (F), 3 (F)
<i>Teesdalia coronopifolia</i> (Bergeret) Thell.	Rare, in thermophilous forests and shrublands	1, 2; 3: r	B; r; C; vr	1, 2	3 (M)
<i>Thlaspi perfoliatum</i> L. subsp. <i>perfoliatum</i>		1, 2; 3: r	A, B; C; vr	1, 2, 3	
Dipsacaceae					
<i>Knautia ambigua</i> (Friv.) Boiss. & Orph.		1, 2; 3: r	C, D; r	1	2 (S&K), 3 (T)
<i>K. arvensis</i> (L.) C. A. Coul.	Very common in <i>Paliurus</i> shrublands	1, 2; 3: r	A; r; B; vc; C: r	1	2 (At), 3 (At, M, T)
<i>K. integrifolia</i> (L.) Bertol. subsp. <i>integrifolia</i>		1: r	C; vr	1	
<i>K. macedonica</i> Griseb.		1, 2; r; 3: s	A; vr; B; s; C: r	1	2 (At), 3 (At, M, T)
Ericaceae					
<i>Vaccinium myrtillus</i> L.	Rare, in <i>Fagus</i> forests	1: r		1 (S)	
Euphorbiaceae					
<i>Euphorbia amygdaloides</i> L. subsp. <i>amygdaloides</i>	Common in forests, locally very common	1; c; 2; s; 3: c	A; vc; C; c; D; vc	1	2 (At, T), 3 (At, M, T)
<i>E. borealis</i> Savi		1, 2: r	C; vr	1	2 (At)
<i>E. cyparissias</i> L.		3: r	C; vr		3 (At)
<i>E. epithymoides</i> L.		1, 2; 3: r	A; r; C; vr	1, 2	3 (F)
<i>E. helioscopia</i> L.	Mostly in <i>Paliurus</i> shrublands	1, 2; 3: r	A; s; B; c; C; vr	1, 2	3 (M)
<i>E. lingulata</i> Heuff.		2, 3: r	C; vr	2	3 (F)
<i>E. platyphyllas</i> L.	A rare species of azonal forests	1, 2: r	A; r	1	2 (F)
<i>E. taurinensis</i> All.		1, 2; 3: r	A; vr; B; C; r	1	2 (At), 3 (At, T)
Fagaceae					
<i>Castanea sativa</i> Mill.	Taxon does not form pure stands except in east part of Greek Belles (small thickets in <i>Fagus</i> and <i>Quercus</i> forests). In Krousia found only as juvenile	1, 2; 3: r	A; s; C; D; vr	1, 2	3 (M)
<i>Fagus sylvatica</i> L. subsp. <i>sylvatica</i>	Taxon formed extensive forests, mainly in Belles	1; c; 2; r; 3: c	A; vr; C; r; D; vc	1	2 (At), 3 (At, T)
<i>Quercus cerris</i> L.		1, 2: r	C; D; vr	1	2 (At, G)
<i>Q. cocccifera</i> L.		1; s; 3: c	A; B; r; C; c	1	3 (At, M)
<i>Q. frainetto</i> Ten.	Taxon formed extensive forests, mainly in Krousia	1; r; 2; 3: c	A; vr; B; r; C; c; D; vr	1	2 (At, G, T), 3 (At, M, T)

Table 8. Continuation.

taxa	habitat	constancy in subareas	constancy in orders	new record	recorded by other authors
<i>Q. petraea</i> subsp. <i>medwediewii</i> (A. Camus) Menitsky	Taxon formed extensive forests in Krouisia and Belles	1:c; 2:s; 3:c	A:r; C:vc; D:vc	1	2 (At, T), 3 (At, M, T)
<i>Q. pubescens</i> Willd.	Taxon formed extensive forests, mainly in Krouisia	1:r; 2;3:c 1,2,3;r	A:s, B; C:c B,C:vr	1 1	2 (At, G), 3 (At, M, T) 2 (At), 3 (At)
<i>Q. robur</i> subsp. <i>pedunculiflora</i> (K. Koch) Menitsky					
Gentianaceae					
<i>Centaurium erythraea</i> Rafn subsp. <i>erythraea</i>					
Geraniaceae					
<i>Geranium columbinum</i> L.	Mostly in thermophilous forests and shrublands	1,2,3:r 1,2,3;c	A:t; B:s, C:r; D:vr A,B; C:vc; D:r	1 1	2 (At), 3 (At, M, T) 2 (At, T), 3 (At, M, T)
<i>G. lucidum</i> L.	Very common in forests and shrublands of low altitudes				
<i>G. macrorhizum</i> L.	In <i>Tilia</i> stands	1,3:r 3:r	D:vr C:vr	3 3	1 (S) 3 (F)
<i>G. molle</i> subsp. <i>brutium</i> (Gasp.) Graebn.		1,2,3:r	A:s; B:vc, C:r	1	2 (At), 3 (At, F)
<i>G. molle</i> L. subsp. <i>molle</i>		1,2:r	A:s; B:s; C:vr	1	2 (F)
<i>G. pusillum</i> Burn. f.		1:s, 2,3:r	A:ε; B:vr, C; D:s	1	2 (F), 3 (F)
<i>G. robertianum</i> L. subsp. <i>robertianum</i>	Mostly in wet and damp places	1:s, 2;5,3:s	A, B; c, C:r; D:vr	1	2 (At), 3 (At, M)
<i>G. rotundifolium</i> L.	Mostly in forests and shrublands of low altitudes	3:r	C:vr	3	3 (At, M)
<i>G. sanguineum</i> L.					
Guttiferae					
<i>Hypericum montbretii</i> Spach	Rare, in into thermophilus <i>Quercus</i> forests	1:s, 2:c, 3:s	A:vr; C:c, D:r	1	2 (At), 3 (At, T)
<i>H. olympicum</i> L.	Rare, in thermophilous forests and shrublands	2,3:r	C:vr	1	2 (At), 3 (At, M)
<i>H. perforatum</i> L.	Common in thermophilus <i>Quercus</i> forests	1;r, 2,3:c	A, B;s, C:c, D:r	1	2 (At, T), 3 (At, M, T)
Juglandaceae					
<i>Juglans regia</i> L.	Naturalized in Belles and Krouisia mountains. Its occurrence is related with human activities	1:r, 2:s	A:ε; C, D:vr	1,2	
Labiatae					
<i>Ajuga genevensis</i> L.		1,2,3:r	A, C, D:vr	1	2 (At), 3 (At, M, T)
<i>A. repens</i> L.	In good quality stands	1,2,3:r	A:r; B; C; vr; D:r	1	2 (At), 3 (At, M)
<i>Glechoma hirsuta</i> Waldst. & Kit.		1,2,3:r	A, C, D:vr	1	2 (At, T), 3 (At, M, T)
<i>Lamium amplexicaule</i> L. subsp. <i>amplexicaule</i>	Rare, in thermophilous forests and shrublands	2:r	C:vr	1	
<i>L. maculatum</i> L.	Common in forests and shrublands	1,2,3:c	A:vc, B; c, C:s; D:c	1	2 (At, M)
<i>Lycopus europaeus</i> L.	In wet places	1,2,3:r	A:s	1,3	2 (At), 3 (At, M, T)
<i>Melittis melissophyllum</i> subsp. <i>albida</i> (Guss.) P.W.Ball	Locally common in forests	1,2;5,3:s	A;s, C; r; D:vr	1	2 (At), 3 (At, M, T)
<i>Phlomis sarnia</i> L.	In <i>Quercus frainetto</i> forests	3:r	C:vr	3 (F)	
<i>Prunella laciniata</i> (L.) L.		1,2,3:r	A:vr; B; r; C, D:vr	1	2 (At), 3 (At, M)
<i>P. vulgaris</i> L.		1;r, 2;s, 3:r	A:ε; C, D:vr	1	2 (At), 3 (At)
<i>Saxifraga glutinosa</i> L.	In good quality stands	1:r	A, D:vr	1	
<i>Satureja vulgaris</i> (L.) Fritsch	Very common species of <i>Quercus</i> forests	1,2,3:c	A,B; s, C; vc; D:c	1	2 (At, G), 3 (At, M, T)

Table 8. Continuation.

taxa	habitat	constancy in subareas	constancy in orders	new record	recorded by other authors
<i>Scutellaria columnae</i> All. subsp. <i>columnae</i>	Mostly in forests	1, 2; s, 3; c	A; s, C; s, D; c	1	2 (At, T), 3 (At, M, T)
<i>Stachys alopecurus</i> (L.) Benth.	Rare, in thermophilous forests and shrublands	1; r	C; vr	1

<i>Astragalus glycyphyllos</i> L.	Mostly in forests	1; s, 2, 3; r	A; s, C; D; r	1	2 (At), 3 (At, M, T)
<i>A. glycyphylloides</i> DC.	One locality in <i>Platanus</i> stand	2; r	A; vr		2 (F)
<i>A. onobrychis</i> L.	Rare, in thermophilous forests and shrublands	1, 3; r	A, B; C; vr	1	3 (At)
<i>Chamaecytisus supinus</i> (L.) Link	Mostly in forests	1, 2, 3; r	A, C; vr; D; r	1	2 (At), 3 (At, T)
<i>C. triflorus</i> (Lam.) Skalická	Mostly in forests	1, 2, 3; r	C; i; D; vr	1	2 (At), 3 (At, T)
<i>Cobaea arborescens</i> L.		3; r	C; vr	1	3 (At, F)
<i>Dorycnium herbaceum</i> Vill. subsp. <i>herbaceum</i>	Mostly in <i>Quercus pubescens</i> forests	1; r, 2; s, 3; r	C; r	1	2 (At, S), 3 (At, M, T, S)
<i>Genista carinallis</i> Griseb.	Mostly in <i>Quercus</i> and <i>Fagus</i> forests	1, 2; r, 3; s	C; i; D; vr	1	1 (S), 2 (At), 3 (At, M, T)
<i>G. tinctoria</i> L.		1; r	C; D; vr	1	
<i>Hippocratea emerus</i> subsp. <i>emeroides</i> (Boiss. & Spruner) Lassen	Mostly in <i>Quercus</i> shrublands	1, 2, 3; r	A; C; r	1	2 (At), 3 (At, M)
<i>Lathyrus aphaca</i> L.		1, 2, 3; r	B; vr; C; r	1	2 (At), 3 (At, T)
<i>L. laxiflorus</i> (Desf.) Kuntze	Mostly in <i>Quercus</i> and <i>Fagus</i> forests	1, 2, 3; c	C; e; D; vc	1	2 (At, S), 3 (At, M, T, S)
<i>L. niger</i> (L.) Bernh. subsp. <i>niger</i>	Mostly in <i>Quercus</i> and <i>Fagus</i> forests	1, 2; s, 3; c	C; r; D; vr	1	2 (At, G), 3 (At, M, T)
<i>L. missolia</i> L.		1; r, 2; s, 3; r	B; C; r	1	2 (At), 3 (At, T)
<i>L. pratensis</i> L.	In <i>Castanea</i> and <i>Fagus</i> forests	1; r	C; D; vr	1	1 (S)
<i>L. sphaericus</i> Retz.		1; r, 2; c, 3; s	A; vr; B; C; s	1	2 (At), 3 (At, M, T)
<i>L. venetus</i> (Mill.) Wohlf.	Mostly in <i>Quercus petraea</i> subsp. <i>medwediewii</i> and <i>Tilia</i> forests	1; c, 2; r, 3; s	C; s; D; c	1	2 (At, T), 3 (At, T)
<i>Lens nigricans</i> (M. Bieb.) Gordon		1, 2, 3; r	C; D; vr	1	2 (At), 3 (At)
<i>Lotus corniculatus</i> L.	Rare, in thermophilous forests and shrublands	1, 2, 3; r	B; s; C; vr	1	2 (At), 3 (At, M, T)
<i>Lupinus angustifolius</i> L.	Rare, in thermophilous forests and shrublands	1; 2; r	C; vr	2 (At)	
<i>Medicago arabica</i> (L.) Huds.	Very common in <i>Paliurus</i> shrublands	1, 2, 3; r	A; s; B; vc; C; vr	1, 2	3 (F)
<i>M. lupulina</i> L.		1, 2; s, 3; s	A; vr; B; s; C; vr	1	2 (At), 3 (At, T)
<i>M. minima</i> (L.) Bartal.		1; r, 2; s, 3; r	A; s; C; s	1, 2	3 (M)

Table 8. Continuation.

taxa	habitat	constancy in subareas	constancy in orders	new record	recorded by other authors
<i>M. monspeliacana</i> (L.) Trautv.	Rare, in thermophilus forests and shrublands	1; 2; r	A; vr; B; r; C; vr	1,2	2 (At), 3 (At, M)
<i>M. rigidula</i> (L.) All.		1, 2, 3; r	B; C; vr	1	2 (F)
<i>Melilotus officinalis</i> (L.) Pall.		1; 2; r	A; r; C; vr	1	2 (F)
<i>Ornithopus compressus</i> L.	Mostly in thermophilus shrublands and forests	1; r, 2; 3; s	A; vr; B; C; s; D; vr	1	2 (At), 3 (At, M, T)
<i>Robinia pseudoacacia</i> L.	Doubtfully naturalized. Its occurrence is connected with human impact	1, 2; r	A; vr	1,2	
<i>Spartium junceum</i> L.	Found only in the SE part of Belles, in <i>Quercus</i> shrublands	1; r	C; vr	1	
<i>Trifolium alpestre</i> L.	Mostly in <i>Quercus</i> forests	1; s; 2; r; 3; s	A; B; vr; C; s; D; r	1 (S), 2 (At), 3 (At, M, T)	
<i>T. angustifolium</i> L.	Mostly in thermophilus shrublands and forests	1; r; 2; 3; s	B; C; s	1	2 (At), 3 (At)
<i>T. arvense</i> L.	Mostly in thermophilus shrublands and forests	1; r; 2; 3; s	A; vr; C; s; D; r	1	2 (At), 3 (At, M)
<i>T. campestre</i> Schreb.	Scattered into forests and shrublands	1, 2; s; 3; r	B; C; D; s	1	2 (At), 3 (At, M, T)
<i>T. glomeratum</i> L.		1, 2; 3; r	B; C; vr	1,2	3 (F)
<i>T. hirtum</i> All.		1; r; 2; s; 3; r	B; r; C; s; D; vr	1	2 (At, T), 3 (At, M, T)
<i>T. medium</i> subsp. <i>balcanicum</i> Velen.	Mostly in <i>Quercus</i> forests	1, 2; 3; s	A; s; B; r; C; D; s	1	1 (H), 2 (At, H), 3 (At, T, H)
<i>T. ochroleucon</i> Huds.	Mostly in <i>Quercus</i> forests	1; s; 2; 3; r	A; vr; C; r; D; c	1	2 (At), 3 (At, M, T)
<i>T. pignantii</i> Fauché & Chaub.	Mostly in <i>Quercus</i> forests	1; r	C; D; vr	1	
<i>T. repens</i> L.		1, 2; 3; r	C; D; vr	1	2 (At), 3 (At, M, T)
<i>T. subterraneum</i> L.	Mostly in thermophilus shrublands and forests	1; s; 2; c; 3; s	A; vr; B; c; C; s	1	2 (At), 3 (At, M, T)
<i>Vicia cassubica</i> L.		1, 2; r; 3; s	A; vr; B; C; r; D; s	1	2 (At), 3 (At, M, T)
<i>V. grandiflora</i> Scop.	Common species of forests and shrublands	1, 2; 3; c	A; B; C; c; D; s	1	2 (At, T), 3 (At, M, T)
<i>V. hirsuta</i> (L.) S.F. Gray	Common species of forests and shrublands	1, 2; 3; c	A; r; B; c; C; vc; D; s	1	2 (At), 3 (At, M, T)
<i>V. lathyroides</i> L.	Mostly in thermophilus shrublands and forests	1; r; 2; c; 3; s	A; vr; B; c; C; s	1	2 (At), 3 (At)
<i>V. tenuifolia</i> subsp. <i>dalmatica</i> (A. Kern.) Greuter	In <i>Quercus</i> forests	3; r	C; vr	3 (At, M, T, S)	
<i>V. tetrasperma</i> (L.) Schreb.		1; r; 2; c; 3; r	C; s; D; r	1	2 (At, T), 3 (At, M, T)
<i>V. villosa</i> subsp. <i>varia</i> (Host) Corb.	Mostly in thermophilus shrublands and forests	1, 2; 3; r	A; vr; B; s; C; D; vr	1	2 (At), 3 (At, M, T)
<i>V. villosa</i> Roth subsp. <i>villosa</i>	Mostly in thermophilus shrublands and forests	1; s; 2; r; 3; s	A; r; B; c; C; r	1	2 (At), 3 (At, T)
<i>Linaceae</i>		1; r	C; vr	1	
<i>Linum thraicum</i> Degen					
<i>Moraceae</i>	Doubtfully naturalized. Its occurrence is connected with human impact	1, 2; r	A; B; C; vr	1,2	
<i>Ficus carica</i> L.	Doubtfully naturalized. Its occurrence is connected with human impact	2; r	A; vr	2 (F)	
<i>Morus alba</i> L.					
<i>Oleaceae</i>					
<i>Fraxinus ornus</i> L.	Very common species in forests	1, 2; 3; c	A; vc; B; s; C; vc; D; vc	1	2 (At, G, T), 3 (At, M, T)
<i>Jasminum fruticans</i> L.	Mostly in <i>Quercus</i> shrublands	1, 2; 3; r	A; B; vr; C; r	1	2 (At), 3 (At)
<i>Ligustrum vulgare</i> L.	Rare, in forests and shrublands	2; 3; s	A; B; C; r; D; vr	2 (At), 3 (At)	

Table 8. Continuation.

taxa	habitat	In one locality in <i>Quercus</i> shrublands	constancy in subareas	constancy in orders	new record	recorded by other authors
<i>Olea europaea</i> subsp. <i>oleaster</i> (Hoffm. & Link) Negodi	In wet places	3: r	B: vr	1	3 (F)	
<i>Phillyrea latifolia</i> L.	Mostly in <i>Quercus</i> shrublands	1,3: r	C: r	1	3 (F)	
Onagraceae						
<i>Circaea lutetiana</i> L.	Mostly in <i>Fagus</i> forests	1,2: r	A, D: vr	1	2 (F)	
<i>Epilobium angustifolium</i> L.	Mostly in <i>Fagus</i> forests	1,2,3: r	C, D: vr	2	1 (S), 3 (M)	
<i>E. lanceolatum</i> Sebast. & Mauri	Mostly in <i>Fagus</i> forests	1,3: r	C: vr, D, c	1	3 (At, T)	
<i>E. parviflorum</i> Schreb.	Mostly in <i>Fagus</i> forests	1: r	A, C: vr	1		
Oxalidaceae						
<i>Oxalis acetosella</i> L.	In wet and damp places	1,2: r	A: s, B: vr	1	2 (F)	
Papaveraceae						
<i>Chelidonium majus</i> L.	In good quality stands	1,2,3: r	A: r, C: vr	1,2	3 (M)	
<i>Corydalis solida</i> (L.) Swart	Rare, in thermophilous forests and shrublands	2,3: r	C, D: vr	2	3 (M)	
<i>Fumaria parviflora</i> Lam.	Rare, in shrublands	1,2,3: r	A: vr, B: vc, C: r	1,2,3		
<i>Papaver dubium</i> L. subsp. <i>dubium</i>	Rare, in shrublands	1,2: r	B: r, C: vr	1	2 (F)	
<i>P. rhoeas</i> L.	Rare, in shrublands	1,2,3: r	A: s, B: c, C: vr	1	2 (At), 3 (At, M)	
Phytolacaceae						
<i>Phytolacca americana</i> L.	Mostly in <i>Alnus</i> stands	1,2: r	A: s	1	2 (F)	
Plantaginaceae						
<i>Plantago bellardii</i> All.	Rare, in <i>Palmaria</i> stands	1,2: r	B: r	1,2		
<i>P. lanceolata</i> L.		1,2,3: r	A: vr, B: s, C: vr		1 (S&K), 2 (At), 3 (At, M)	
<i>P. major</i> L. subsp. <i>major</i>	In <i>Alnus</i> stands	1,2,3: r	A: s	1	2 (F), 3 (M)	
Platanaceae						
<i>Platanus orientalis</i> L.	In pure or mixed with <i>Alnus</i> or <i>Salix</i> stands, along streams and wet alluvial plains	1: s, 2,3: r	A: vc, C: r	1	2 (At), 3 (At, M)	
Plumbaginaceae						
<i>Armeria rumelica</i> Boiss.		1,2,3: r	A, C: vr	1	2 (At), 3 (At)	
Polygonaceae						
<i>Fallopia convolvulus</i> (L.) Å. Löve	Mostly in thermophilous shrublands and forests	1: s, 3: r	A: s, B: vr, C: r, D: s	1	3 (At, M, T)	
<i>Rumex acetosella</i> L.	Mostly in <i>Alnus</i> stands	1: r, 2: s, 3: r	A, C, D: vr		1 (S), 2 (At), 3 (At, M, T)	
<i>R. conglomeratus</i> Murray	In wet and damp places	1,2: r	A: r, B: vr	1,2		
<i>R. crispus</i> L.		2: r	A, B: vr	2		
<i>R. obtusifolius</i> L. subsp. <i>obtusifolius</i>		1: r	A, C: vr	1		
<i>R. pulcher</i> L. subsp. <i>pulcher</i>	Its occurrence is connected with human impact	1: s, 2,3: r	A: vr, B: c, C: vr	1	2 (At), 3 (At, F)	
<i>R. sanguineum</i> L.	In good quality stands	1,2,3: r	A: r, D: vr	1,2	3 (F)	
Primulaceae						
<i>Anagallis arvensis</i> L.	Rare, in shrublands and forests	1,2: r	A, B, C: vr	1	2 (At)	

Table 8. Continuation.

taxa	habitat	constancy in subareas	constancy in orders	new record	recorded by other authors
<i>Cyclamen hederifolium</i> Sol.	Mostly in close canopy forests and shrublands	1:s,2:3:c	A:vr,B:r,C:c,D:s	1	2 (At), 3 (At, M, T)
<i>Lysimachia nummularia</i> L.	In wet places	1,3:r	A:r,C:D:vr	1	3 (At, T)
<i>L. punctata</i> L.		1,2,3:r	A:5,C:D:vr	1	2 (At), 3 (At, M, T)
<i>Primula acaulis</i> (L.) L.	Mostly in <i>Quercus</i> and <i>Fagus</i> forests	1:5,2:s,3:c	A:vr,C:D:s	1	2 (At,T), 3 (At, M, T)
<i>P. veris</i> L.	Mostly in <i>Quercus</i> and <i>Fagus</i> forests	1:s,2:r,3:r	A:vr,C:r,D:s	1,2	3 (M, F)
Pyrolaceae					
<i>Monotropa hypopitys</i> L.	In <i>Eagus</i> and rarely in <i>Tilia</i> forests	1,3:r	D:vr	1,3	
<i>Orthilia secunda</i> (L.) House	In <i>Fagus</i> forests	1:r	D:vr	1	
Ranunculaceae					
<i>Anemone pavonina</i> Lam.	Common in <i>Paliurus</i> and <i>Quercus</i> shrublands	1:r,2:c,3:s	A:r,B:c,C:r	1,2	3 (M)
<i>Caltha palustris</i> L.	In <i>Ahnu</i> stands	1:r	A:vr	1	
<i>Clematis flammula</i> L.	Mostly into thermophilus forests and shrublands	1,2:s,3:r	A:r,B:c,C:s	1	2 (At), 3 (At, M, T)
<i>C. vitalba</i> L.	Very common in <i>Ahnu</i> stands, but also found in other forests and shrublands	1:c,2:r,3:s	A:vc,B,C,D:s	1	2 (At,G), 3 (At, M, T)
<i>Helleborus odorus</i> subsp. <i>cyclophyllus</i> (A. Braun) Strid	Mostly in <i>Quercus</i> forests	1:r,2:s,3:c	A:vr,B:r,C:s,D:r	1	2 (At,G,T), 3 (At, M, T)
<i>Nigella damascena</i> L.	Rare, in shrublands and forests	1,2,3:r	A:vr,B:r,C:vr	1	2 (At), 3 (At, M)
<i>Ranunculus arvensis</i> L.		1:r	A,C:vr	1	
<i>R. chius</i> DC.		1,2:r	A:vr,B:r,C:vr	1,2	
<i>R. ficaria</i> subsp. <i>ficariiformis</i> (F.W.Schultz) Rouy & Foucaud		1:r,2:c,3:s	A,B:r,C:s	1	2 (F), 3 (M)
<i>R. millefoliatus</i> Vahl		2:r	C:vr	2 (F)	
<i>R. neapolitanus</i> Ten.	The most common <i>Ranunculus</i> species of forests and shrublands	1:r,2:c,3:s	A:vr,B:r,C:vr	1,2	3 (M)
<i>R. psilotachys</i> Griseb.	In azonal forests	3:r	A:vr		3 (At,M)
<i>R. repens</i> L.	In azonal forests	1,3:r	A:s	1	3 (M,F)
<i>Thalictrum aquilegifolium</i> L.	In forests of high altitudes	2,3:r	C:vr,D:r	2 (At), 3 (At, T)	
Resedaceae					
<i>Reseda lutea</i> L.	Rare, in shrublands and forests	1:r	C:vr	1	
Rhamnaceae					
<i>Paliurus spina-christi</i> Mill.	Taxon formed shrublands on Belles and Krouisia. Related to grazing	1:s,2,3:c	A:s,B:vc,C:s	1	2 (At), 3 (At, M)
Rosaceae					
<i>Agrimonia eupatoria</i> L. subsp. <i>eupatoria</i>		1,2,3:r	A:vr,B:s,C:vr	1	2 (At), 3 (At, M, T)
<i>Aphanes floribunda</i> (Murb.) Rothm.	Rare in shrublands and forests	1,2,3:r	B:r,C:vr	1,3	2 (F)
<i>Arenaria agrestionoides</i> (L.) DC. subsp. <i>agrestionoides</i>	Mostly in <i>Quercus</i> forests	1,2,3:r	A:f,C:D:s	1	2 (At,G,T), 3 (At, M, T)
<i>Crataegus monogyna</i> Jacq. subsp. <i>monogyna</i>	One of the most common species in forests and shrublands	1,2,3:c	A,B,C:vc,D:c	1	2 (At,T), 3 (At, M, T)

Table 8. Continuation.

taxa	habitat	constancy in subareas	constancy in orders	new record	recorded by other authors
<i>Crataegus monogyna</i> subsp. <i>azarella</i> (Griseb.) Franco	In <i>Quercus</i> forests	2: r	C: vr		Recorded by Gamisans & Hebrard (1980) but its occurrence needs confirmation
<i>Crataegus laciniata</i> Ucria	In <i>Quercus</i> forests	2: r	C: vr		Recorded by Gamisans & Hebrard (1980) but its occurrence needs confirmation
<i>Filipendula vulgaris</i> Moench	Mostly in <i>Fagus</i> forests, but also in <i>Paliurus</i> shrublands	1, 2: r; 3: s	A: B; r; C: vr	1	2 (At), 3 (At)
<i>Fragaria vesca</i> L.	Mostly in azonal forests	1: r; 2: r; 3: s	A: vr; B: c; C: r; D: s	1	2 (At), 3 (At)
<i>Geum urbanum</i> L.	Only as juvenile. Its occurrence is related to human impact	1: r; 2: r; 3: r	A: r; C: D; vr	1	2 (At), 3 (At)
<i>Potentilla micrantha</i> DC.	One of the most common species in forests	1: s; 2: c; 3: s	A: s; B: r; C: c; D: vc	1	2 (At, T), 3 (At, M, T)
<i>P. recta</i> L.	Mostly in thermophilus shrublands and forests	1: r; 2: c; 3: s	A: r; B: c; C: r	1	2 (At), 3 (At, M, T)
<i>Prunus avium</i> L.	Mostly in thermophilus shrublands and forests	1, 2, 3: r	A, B, C, D; vr	1	2 (At), 3 (At, M, T)
<i>P. spinosa</i> L.	Very common species in <i>Paliurus</i> shrublands	1, 2, 3: r	A, B; s; C: r	1	2 (At), 3 (At, M, T)
<i>Pyrus amygdaliformis</i> Vill.	Mostly in thermophilus shrublands and forests	1: r; 2: s; 3: r	A: s; B: vc; C: r; D: vr	1	2 (At), 3 (At, M, T)
<i>P. communis</i> L.	Common in forests	1: r; 2: s; 3: r	A: s; B: vr; C: r	1	2 (At, G), 3 (At, M, T)
<i>Rosa arvensis</i> Hudson - Taxonomy of <i>Rosa</i> species according to Zieliński (1990)	Common in forests	1: s; 2: c; 3: s	A: c; B: r; C: D; c	1	2 (At, T, Z), 3 (At, T, Z)
<i>R. canina</i> L.	Scattered through shrublands and forests	1: r; 2: c; 3: s	A: s; B: vr; C: D; s		1 (S, Z), 2 (At, Z), 3 (At, T, Z)
<i>R. gallica</i> L.		1, 2, 3: r	A, B; r; C: vr		1 (Z), 2 (At, Z), 3 (At, M, T, Z)
<i>Rubus candicans</i> Rchb.	Mostly in forests of high altitudes	1: s; 2, 3: r	A, B; vr; C; r; D: s	1	2 (At), 3 (At, M, T)
<i>R. canescens</i> DC.	Mostly in forests	1, 2: r; 3: s	A, C; D: r	1	2 (At), 3 (At, T)
<i>R. hirtus</i> Waldst. & Kit.		1: s; 2, r; 3: s	A: c; B: s; C: r; D: c	1	2 (At), 3 (At, M, T)
<i>R. idaeus</i> L.	Found only in <i>Fagus</i> forests	1: r	D: vr	1	
<i>R. sanctus</i> Schreb.	Mostly in forests and shrublands of low altitudes	1: s; 2: c; 3: s	A: vc; B: s; C: r; D: vr	1	2 (At), 3 (At, T)
<i>Sanguisorba minor</i> subsp. <i>muricata</i> (Spach) Briq.		1: r; 2: c; 3: r	A: r; B: s; C: s; D: vr	1	2 (At), 3 (At, M, T)
<i>Sorbus domestica</i> L.	Mostly in <i>Quercus</i> forests	1: r; 2: c; 3: s	C: s; D: vr	1	2 (At, G, T), 3 (At, T)
<i>S. terminalis</i> (L.) Crantz	Mostly in <i>Quercus</i> forests	1, 2: r; 3: s	A: vr; C: D: s	1	2 (At, T), 3 (At, M, T)
Rubiaceae					
<i>Crucianella angustifolia</i> L.	Rare, in shrublands and forests	1, 3: r	C: vr	1	3 (At)
<i>Cruciata laevipes</i> Opiz.	Usually in azonal forests and <i>Paliurus</i> shrublands	1: r; 2: 3: s	A: s; B: s; C: r	1	2, 3; At
<i>C. pedemontana</i> (Bellardi) Ehrend.	Mostly in thermophilus shrublands and forests	1: r; 2, 3: c	A: r; B; C: c	1	2 (At), 3 (At, M)
<i>Galium aparine</i> L.	Very common in shrublands and forests	1, 2, 3: c	A: c; B: vc; C: vc; D: c	1	2 (At), 3 (At, M)
<i>G. divaricatum</i> Lam.	Rare, in shrublands and forests	1: r; 2: s; 3: r	C: r	1	2 (F), 3 (F)
<i>G. exaltatum</i> Krendl. - Taxonomy according to Krendl (1988)	Mostly in <i>Quercus</i> , <i>Tilia</i> and <i>Fagus</i> forests	1: r; 2, 3: c	A, B; r; C: s; D: s	1	2 (At, T), 3 (At, T)
<i>G. laconicum</i> Boiss.	In <i>Quercus</i> forests	2: r	C: vr		Recorded by Gamisans & Hebrard (1980) but its occurrence needs confirmation
<i>G. odoratum</i> (L.) Scop.	In good quality stands	1, 3: r	C; vr; D: c	1	3 (M)

Table 8. Continuation.

taxa	habitat	constancy in subareas	constancy in orders	new record	recorded by other authors
<i>G. spurium</i> L.	Rare, in shrublands and forests	3: r	C:r		3 (At, T)
<i>Galium verum</i> L. subsp. <i>verum</i>	Mostly in thermophilus shrublands and forests	1: s; 2: c; 3: s	A: r; B: s; C: c	1	2 (At), 3 (At, M, T)
<i>Sherardia arvensis</i> L.	Mostly in thermophilus shrublands and forests	1, 2, 3: s	A: s; B: vc; C: r	1	2 (F), 3 (F)
Salicaceae					
<i>Populus tremula</i> L.	In pure or mixed with <i>S. amplexicaulis</i> stands, along streams and wet alluvial plains mainly in Krouisia	1, 3: r	D: vr	1	3 (At, M, T)
<i>Salix alba</i> L. subsp. <i>alba</i>	In mixed stands with <i>Salix</i>	1, 2, 3: r	A: r	1	2 (At), 3 (At, M)
<i>S. amplexicaulis</i> Bory & Chaub.		1, 2, 3: r	A: r	1	2 (At), 3 (At)
<i>S. caprea</i> L.		1, 3: r	D: vr	1	3 (M)
Saxifragaceae					
<i>Saxifraga carpatica</i> subsp. <i>graeca</i> (Boiss. & Heldr.) D.A. Webb	Mostly in thermophilus shrublands and forests	1: r, 2: s; 3: r	A: vr; B; C: r	1	2 (At), 3 (At, M)
<i>S. rotundifolia</i> L.	Mostly in <i>Tilia</i> stands	1: r	D: r	1	
Scrophulariaceae					
<i>Digitalis grandiflora</i> Mill.	In <i>Tilia</i> stands	1, 2, 3: r	A: vr; C: r; D: s	1	2 (At, T), 3 (At, T)
<i>D. laevigata</i> subsp. <i>graeca</i> (Ivanina) Werner	Mostly in forest	1: r	D: vr		
<i>D. lanata</i> Ehrh.	Mostly in forests of high altitudes	1, 2, 3: s	A, B: r; C: D: s	1	2 (At, G), 3 (At, M, T)
<i>D. viridiflora</i> Lindl.	Very rare in forests and shrublands	1, 2, 3: r	C: vr; D: r	1	2 (At), 3 (At, M)
<i>L. genistifolia</i> (L.) Mill.	Mostly in thermophilus shrublands and forests	1, 2: r	B, C; D: vr	1	1 (S), 2 (At, M, T)
<i>L. pelisseriana</i> (L.) Mill.	Rare, in <i>Quercus</i> shrublands	1, 2, 3: r	B: s; C: vr	1	2 (At), 3 (At)
<i>Scrophularia canina</i> L. subsp. <i>canina</i>	In good quality stands	1: r	C: vr	1	
<i>S. nodosa</i> L.	Mostly in <i>Fagus</i> and <i>Abies</i> forests	1, 2, 3: r	A: vr; C: s	1	2 (At), 3 (At, T)
<i>S. scopolii</i> Hoppe	In forests	1, 3: r	A, C: vr; D: s	1	1 (S), 3 (At, M, F)
<i>Verbascum nigrum</i> L.	Mostly in thermophilus forests and shrublands	1, 2, 3: c	A: r; B: s; C: c; D: vr	1	3 (M, F)
<i>V. phoeniceum</i> subsp. <i>flavidum</i> (Boiss.) Bornm.	Rare, in shrublands and forests	1, 3: r	A, B; C: vr	1, 3	2 (At), 3 (At, M, T)
<i>Veronica arvensis</i> L.	Rare, in <i>Quercus</i> shrublands	1: r	C: vr	1	
<i>V. austriaca</i> L.	One of the most common species of forests and shrublands	1, 2, 3: c	A: s; B: c; C, D: vc	1	2 (At, T), 3 (At, M, T) - The record of <i>V. vindobonensis</i> M.A. Fisch. by Gamisans & Hebrard (1980) is probably erroneous
<i>V. hederifolia</i> L. subsp. <i>hederifolia</i>	Mostly in thermophilus shrublands and forests	1, 2, 3: r	A: vr; B: r; C: vr	1	2 (At), 3 (At, M, T)
<i>V. officinalis</i> L.	Mostly in <i>Tilia</i> stands	1, 3: r	D: s	1	3 (At, T)
<i>V. triphyllos</i> L.		3: r	A: vr	3 (F)	
<i>V. urticifolia</i> Jacq.	Mostly in mixed <i>Abies-Fagus</i> stands	1: r	C: vr; D: r	1	2 (At)
<i>V. verna</i> L.		1, 2: r	C, D: vr	1	
Solanaceae		3: r	C: vr	3 (At, M, T)	
<i>Solanum dulcamara</i> L.

<i>O. papilionacea</i> L.		1,2;r	B;C;vr	1	2 (A)

Conclusions

1. In the forests and shrublands of Belles and Krousia, 439 (405 new records) taxa and 429 (five new records) (367 in Disoro and 373 in Mavrovouni) were recorded respectively.
2. Dicotyledonous taxa and families prevail.
3. The majority of taxa appear in all vegetation units, although their constancy values vary.
4. The vascular flora of *Populetea albae* (*Alnus*, *Platanus* and *Salix*) forest vegetation is significantly diversified, most likely as a result of the special ecological conditions (water springs and rivers, or even wastelands).
5. The vascular flora of *Fagetalia sylvatica* (*Tilia*, *Fagus* and *Abies*) forest vegetation is significantly diversified, most likely as a result of climatic conditions (higher precipitation and lower temperatures), lack of strong human impact and presence of a dense canopy.
6. Considering the low number of conducted relevés, *Prunetalia spinosae* (*Paliurus spina-christi*) shrublands shows the highest species richness among the four distinguished units.
7. The high number of taxa which occur in the low-altitude shrublands and forests gradually reduces in the high-altitude forests.
