Received: June 24, 2023 ▷ Accepted: July 12, 2023

**Abstract.** Fourteen new taxa are reported as new to Albania: 60 at the regional level and 18 confirmations of pre-1950 records. The total number of taxa reported for Albania is now 548, which stands for an increase of almost 75% since the publication of the preliminary checklist in 2006.

**Key words:** Albania, Balkans, bryophytes, checklist, floristics, new records

**Citation:** Colacino, C. 2023. Contribution to the bryophyte flora of Albania. -- Phytologia Balcanica, 29 (2): 163-170. -- ISSN 1310-7771 (print), 1314-0027 (online).

## Introduction

Albania still represents one of the less known regions of Europe in relation to its bryophyte flora, as it has been already remarked in earlier papers (Colacino 2004, 2009; Colacino & Sabovljević 2006). A preliminary checklist based on literature references was prepared for the assessment of several collections made during field trips in Albania in preceding years (part of which are reported here). Several of the older surveys were carried out when Albania was still part of the Ottoman Empire, and those works covered principally the border area between Albania and Montenegro or Serbia (Kosova). A few others were carried out around the 1950s, and later (e.g., Petrov 1960). Since the publication of that preliminary check-list interest in the Albanian bryophyte flora has increased (Blockeel & al. 2007, 2009; Colacino & Marka 2009; Papp

& al. 2010, 2018; Marka & Sabovljević 2011; Marka & Xhulaj 2011; Ellis & al. 2012, 2013; van Zanten 2013; Marka & al. 2013, 2018; Marka & Zaloshnja 2017).

Data from several field trips to Albania in 2002-2003 and 2006 are reported here, based on more than 200 specimens collected. Eventually, the resulting state of the bryophyte flora of Albania will be considered briefly.

## Material & methods

The specimens were collected during field work in the regions of Tirana and Shkodër mainly, as well as Lezhë, Durrës, Vlorë, and Kukës. Vouchers have been deposited in the bryological collection at HLUC. A total of more than 200 specimens were collected, belonging to 111 different species. The nomenclature

follows Hodgetts & al. (2020). In some instances, online resources, such as Tropicos, bryonames.org, and GBIF—the Global Biodiversity Information Facility (gbif.org), have been consulted too.

## Results

### Checklist

In the following list the collected species are reported in alphabetical order (Hepatics and Mosses together); the letters in parenthesis refer to the collection localities.

1. *Abietinella abietina* (Hedw.) M.Fleisch. (I)
2. *Alleniella complanata* (Hedw.) S.Olsson, Enroth & D.Quandt (A)(I)
3. *Amblystegium serpens* (Hedw.) Schimp. (A)(E)(K)
4. *Anoectangium aestivum* (Hedw.) Mitt. (E)
5. *Anomodon viticulosus* (Hedw.) Hook. & Taylor (C)
6. *Apopellia endiviifolia* (Dicks.) Nebel & D. Quandt (I) (AA)
7. *Barbula unguiculata* Hedw. (A)(G)(CC)
8. *Brachytheciastrum velutinum* (Hedw.) Ignatov & Huttunen (D)(BB)
9. *Bryum argenteum* Hedw. (M)
10. *Bryum dichotomum* Hedw. (Q)
11. *Calypogeia integriflora* Steph. (U) SR(EN)
12. *Campyliadelphus chrysophyllus* (Brid.) R.S.Chopra (I)
13. *Campylophyllopsis calcarea* (Crundw. & Nyholm) Ochyra (I)(N)
14. *Conocephalum conicum* (L.) Dumort. (Q).
15. *Ctenidium molluscum* (Hedw.) Mitt. (C)(D)(N)
16. *Dicranella heteromalla* (Hedw.) Schimp. (D)
17. *Dicranella howei* Renaud & Cardot. (CC)
18. *Didymodon acutus* (Brid.) K.Saito (I)
19. *Didymodon fallax* (Hedw.) R.H.Zander (G)(M)
20. *Didymodon insulanus* (De Not.) M.O.Hill (J)(K) (U)(V)
21. *Didymodon luridus* Hornsch. (V)(Z1)
22. *Didymodon sinuosus* (Mitt.) Delogne (A)(G)(K)(V)
23. *Didymodon spadiceus* (Mitt.) Limpr. (B)
24. *Didymodon tophaceus* (Brid.) Lisa (V)(X)
25. *Didymodon vinealis* (Brid.) R.H.Zander (E)(V)

26. *Encalypta streptocarpa* Hedw. (A)(D)(E)(G)(H) (N)(P)(Q)(R)
27. *Encalypta vulgaris* Hedw. (B)
28. *Ephememerum recurvifolium* (Dicks.) Boulay (R)
29. *Exsertotheca crispa* (Hedw.) S.Olsson, Enroth & D.Quandt (C)(N)(Z4)
30. *Fissidens dubius* P. Beauv. (D)(R)
31. *Flexitrichum flexicaule* (Schwägr.) Ignatov & Fedosov (B)
32. *Frullania dilatata* (L.) Dumort. (U)(Z2)
33. *Funaria hygrometrica* Hedw. (A)(B)
34. *Grimmia caespiticia* (Brid.) Jur. (G)
35. *Grimmia lisae* De Not. (N)
36. *Grimmia montana* Bruch & Schimp. (I)
37. *Grimmia pulvinata* (Hedw.) Sm. (B)(E)(G)(S)
38. *Gymnostomum aeruginosum* Sm. (AA)
39. *Gymnostomum calcareum* Nees & Hornsch. (Q)
40. *Homalothecium lutescens* (Hedw.) H.Rob. (I)
41. *Homalothecium sericeum* (Hedw.) Schimp. (A)(B) (D)(E)(I)(J)(M)(N)(P)(T)(V)(Z3)
42. *Hygrohypnum luridum* (Hedw.) Jenn. (P)
43. *Hygroamblystegium tenax* (Hedw.) Jenn. (O)
44. *Hypnum cupressiforme* Hedw. (A)(D)(G)(I)(J)(P) (Z1)
45. *Hypnum resupinatum* Taylor (P)(Z1)
46. *Kindbergia praelonga* (Hedw.) Ochyra (CC)
47. *Leptobarbula berica* (De Not.) Schimp. (Q)
48. *Leucodon sciuroides* (Hedw.) Schwägr (F)(T)(U)
49. *Lewinskya acuminata* (H.Philib.) F.Lara, Garilleti & Goffinet (Z4)
50. *Lewinskya affinis* (Schrad. ex Brid.) F.Lara, Garilleti & Goffinet (O)(P)(U)
51. *Lewinskya rupestris* (Schleich. ex Schwägr.) F.Lara, Garilleti & Goffinet (Y)
52. *Lewinskya speciosa* (Nees) F.Lara, Garilleti & Goffinet (I)
53. *Lewinskya striata* (Hedw.) F.Lara, Garilleti & Goffinet (O)
54. *Lunularia cruciata* (L.) Dumort. ex Lindb. (V)
55. *Marchantia polymorpha* L. (Q)
56. *Mnium marginatum* (Dicks.) P.Beauv. (A)
57. *Nogopterium gracile* (Hedw.) Crosby & W.R.Buck (B)
58. *Orthotrichum cupulatum* Brid. (E)
59. *Orthotrichum diaphanum* Brid. (G)
60. *Orthotrichum pulchellum* Brunt. (D)

61. *Oxyrrhynchium schleicheri* (R.Hedw.) Röll (AA)  
 62. *Palustriella falcata* (Brid.) Hedenäs (AA)  
 63. *Pedinophyllum interruptum* (Nees) Kaal. (Q)(U)  
 64. *Plagiochila porelloides* (Torr. ex Nees) Lindenb. (A)  
 65. *Plagiomnium cuspidatum* (Hedw.) T.J.Kop. (I)  
 66. *Plagiothecium denticulatum* (Hedw.) Schimp. (L)  
 67. *Plasteurhynchium meridionale* (Schimp.) M. Fleisch. (A)  
 68. *Pseudocrossidium revolutum* (Brid.) R.H.Zander (A)(B)(G)(H)(S)  
 69. *Pterigynandrum filiforme* Hedw. (F)(U)  
 70. *Ptychostomum capillare* (Hedw.) Holyoak & N. Pedersen (H)(I)(N)(S)(BB)  
 71. *Ptychostomum compactum* Hornsch. (I)  
 72. *Ptychostomum creberrimum* (Taylor) J.R.Spence & H.P.Ramsay (E)  
 73. *Ptychostomum elegans* (Nees.) D.Bell & Holyoak (I)(J)(M)  
 74. *Ptychostomum pallens* (Sw. ex anon.) J.R. Spence (H)  
 75. *Ptychostomum pseudotriquetrum* (Hedw.) J.R.Spence & H.P.Ramsay ex Holyoak & N.Pedersen (Q)(AA)  
 76. *Ptychostomum turbinatum* (Hedw.) J.R.Spence (J)(M)  
 77. *Pulgiera lyelli* (Hook. & Taylor) Plášek, Sawicki & Ochyra (F)(O)  
 78. *Radula complanata* (L.) Dumort. (D)(N)(Z1)  
 79. *Reboulia hemispherica* (L.) Raddi (A)(H)(AA)  
 80. *Rhynchostegiella curviseta* (Brid.) Limp. (I)  
 81. *Rhynchostegium confertum* (Dicks.) Schimp. (D)(V)  
 82. *Rhynchostegium megapolitanum* (Blandow ex F.Weber & D.Mohr) Schimp. (M)(CC)  
 83. *Scapania aspera* M.Bernet & Bernet (N)  
 84. *Schistidium apocarpum* (Hedw.) Bruch & Schimp. (I)  
 85. *Schistidium brunnescens* ssp. *griseum* (Nees & Hornsch.) H.H.Bлом (D)  
 86. *Schistidium crassipilum* H.H.Bлом (E)(I)(S)  
 87. *Schistidium dupretii* (Thér.) W.A.Weber (C)(I)(N)(T)

R. Tacchi). - VLO

Acronyms for the regions where the specimens were collected: TIR Tiranaë, SHK Shkodër; LZH Lezhë, DUR Durrës, VLO Vlorë, and KUK Kukës.

For all localities legit & deter. C. Colacino [except for *P.falcata* in (AA) and the specimens in (BB) & (CC) determined by R. Tacchi]. All specimens are deposited in HLUC.

## Conclusions

One-hundred and eleven species are reported, with 14 species new for Albania (one, *Schistidium elegantulum* ssp. *wilsonii*, is new as a subspecies for the Balkans, even though the species is actually present everywhere, except in SL and TR), 60 new regional records, and 18 confirmations of pre-1950 regional records, as well as one confirmation at the national level. In the preliminary checklist of 2006, the number of species for Albania was 327 (after updating to the currently accepted taxonomy this number is 314 - synonymy will be indicated in an updated checklist now in preparation). Including the new records reported here, the total number of bryophytes for Albania is 548 taxa (species, subspecies and varieties).

From a conservation point of view, all species considered are at the European level of LC (Least Concern) or NE (Not Evaluated), with the exception of *Ptychostomum turbinatum* VU (Vulnerable) and *Ephemerum recurvifolium* NT (Near Threatened), according to a recent IUCN report (Hodgett & al. 2019).

*P. turbinatum* (VU), a circumpolar arctic-boreal to temperate species, was collected twice on May 4, 2003 in two areas near Boga (Malësi i Madhe - SHK) in the Montane Mediterranean Climatic Zone, in disturbed areas: once on a burned trunk base, at 1120 m, and

a second time on soil in a pasture alongside a beech forest, at 1110 m. It was already collected for the first time for Albania in a mountain area (850-900 m) in the region of Lezhë by van Zantem (2013), who classified it tentatively as such (*Bryum* cfr. *turbinatum*); the collection data say: "on clayey soil along river, ... (ver. P. Sollman) (plants reddish)." It is not reported being in danger in the available red lists of Serbia and Montenegro, Bulgaria, and Romania.

*E. recurvifolium* (NT) collected on limestone stream gravel (dry), 430 m - SHK, has been earlier collected in VLO. This sub-Mediterranean species is reported as vulnerable, or critically endangered in the red lists of several Balkan Countries: SR(VU), BG (CR), RO (CR). It has recently been reported as new to Albania by Marka & al. (2013) on the basis of one specimen found in VLO: "Sarandë, Butrint, wetland area, on soil, saline grassland".

Several other species, however, are in danger at local level, according to the red lists available for Serbia and Montenegro (Sabovljević & al. 2004), Bulgaria (Natcheva & al. 2006), and Romania (Ştefanuț & Goia 2012): *Campylophyllopsis calcarea* RO (EN), *Didymodon acutus* RO (VU), *Didymodon sinuosus* RO (EN), *Grimmia caespiticia* MN (VU), RO (CR), *Hygroamblystegium tenax* RO (VU), *Leptobarbula berica* MN (VU), *Lunularia cruciata* RO (CR), *Nogopterium gracile* RO (EN), *Orthotrichum pulchellum* SR & MN (Low Risk), RO (EN), *Oxyrrhynchium schleicheri* RO (VU), *Rhynchosstegium megapolitanum* RO (VU), *Schistidium robustum* RO (CR), *Scorpiurum circinatum* (BG (EN), *Syntrichia ruraliformis* RO (VU), *Timmiella anomala* SR (EN), *Tortella densa* RO (CR), *Tortella flavovirens* RO (CR), *Tortella humilis* BG (CR) RO (NT), *Tortella nitida* BG (CR) RO (EN).

## Discussion

The number of collections from Albania, notwithstanding the recent dramatic increase in species number, is not sufficient yet for a compilation of a red list, as shown for Romania, where some species were considered rare or at risk based on the scarcity of collections (Ştefanuț & Goia 2012). A few species

considered for the preliminary red list of Albanian bryophytes (Marka et al. 2012) were still collected, in particular, *Ptychostomum creberrimum*, cited in the checklist of Serbia as DD (Data Deficient). It was collected once in Korça (Papp et al. 2010), and one more time in Dajti (TIR), as reported in this paper. *Tortella humilis*, already indicated above as CR (BG), NT (RO), is with three records for Albania: one from Karavasta (Colacino & Marka 2009) and two from Korça (Papp et al. 2010), with two more findings recorded in this paper in Dajti (TIR). And finally, *Tortula marginata*, DD (MN), with one record from VLO in 1960 (Petrov), and two more reported here from Malësi i Madhe (SHK). Apparently, planned extensive explorations and collection of bryophyte distribution data in the various floristic zones of Albania are needed for a realistic red list. Considering that Albania is an important meeting area of the Mediterranean, Central European and Pontic floristic elements, it is quite likely that much remains to be discovered. This is also supported by the comparison of the bryophyte diversity of Albania with that of the other Southeast European countries. Probably, new field trips in Albania will still continue to produce new records of relatively abundant species in the bordering countries at least.

**Acknowledgements.** The author is very grateful to several colleagues from Albania who accompanied him during some of the field trips: Petrit Hoda of the Botanical Garden of Tirana, Arben Pambuku of the Albanian National Geological Service, Aleko Miho and Jani Marka of the Faculty of Natural Sciences of the University of Tirana, and Vilma Gimjani of the Department of Defence (all affiliations refer to the time of the field trips). Special thanks go to the Director of the Botanical Garden, Liri Dinga, for the office made available in the Garden facilities in April 2003.
